

Reaction Torque Sensors

01090 Series

SHAFT TORQUE SENSOR

The torque output of motors and absorbers can often be sensed by measuring the reaction torque required to prevent the housing from rotating. They are also ideal for limited rotation applications such as the measurement of torque required to turn a valve, fastener or actuator shaft.

SPECIFICATIONS

| | |
|----------------------------------|----------------------------------|
| Capacity..... | 100 to 10,000 in-lbs (See chart) |
| Overload capacity..... | 150% of F.S. |
| Output at F.S..... | 2.0 mV/V nominal |
| Non-linearity..... | 0.10% of F.S. |
| Hysteresis..... | 0.10% of F.S. |
| Zero balance..... | 1.00% of F.S. |
| Compensated temperature..... | 70 to 170°F |
| Useable temperature..... | -65 to +250°F |
| Temperature effect on zero..... | 0.002% of F.S./°F |
| Temperature effect on span..... | 0.002% of Rdg./°F |
| Bridge resistance..... | 350 Ohms |
| Excitation voltage, maximum..... | 20 Vdc |
| Material..... | Alloy Steel |

DIMENSIONS

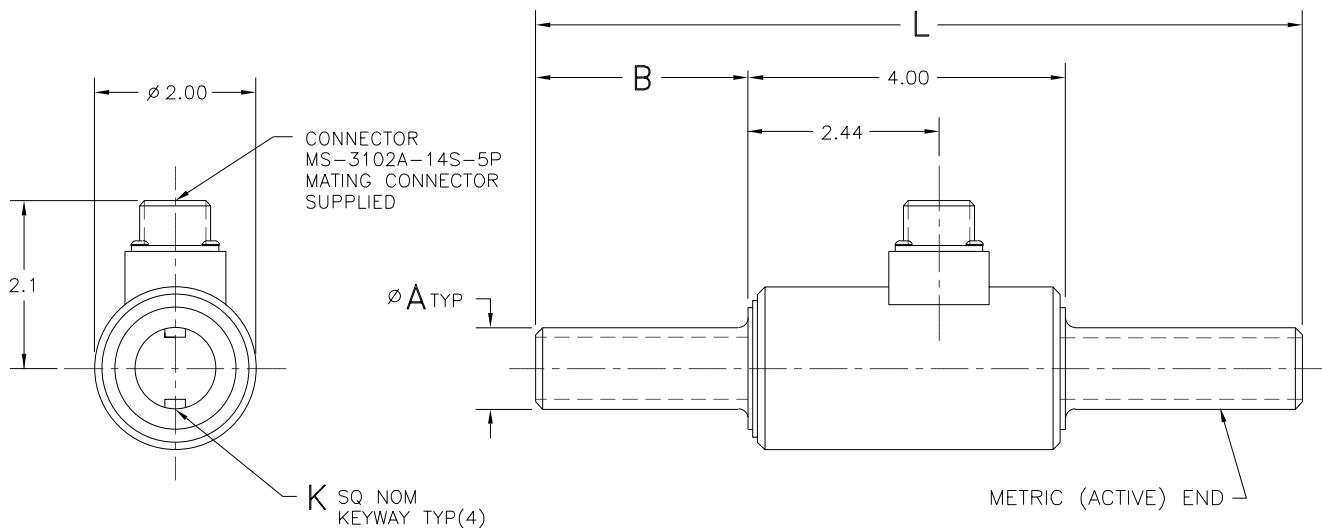

| MODEL | A | CAPACITY | | | STANDARD | | OPTION "L" | | K |
|-----------|------|----------|-------|------|----------|------|------------|------|------|
| | | IN LB | FT LB | NM | L | B | L | B | |
| 01090-012 | .75 | 100 | 8 | 12 | 8.5 | 2.25 | 10.00 | 3.00 | 3/16 |
| 01090-022 | | 200 | 17 | 22 | | | | | |
| 01090-052 | 1.00 | 500 | 40 | 55 | 9.50 | 2.75 | 12.75 | 4.38 | 1/4 |
| 01090-013 | | 1000 | 83 | 110 | | | | | |
| 01090-023 | | 2000 | 167 | 225 | | | | | |
| 01090-053 | 1.50 | 5000 | 417 | 565 | 9.50 | 2.75 | 12.75 | 4.38 | 3/8 |
| 01090-014 | | 10000 | 833 | 1130 | | | | | |

OPTIONS

(Consult SDI for dimensions)

For different end configurations,
change model number from 01090 to:

| Model | Non active end | Active end |
|-------|----------------|---------------|
| 01091 | Keyed shaft | Female socket |
| 01092 | Keyed shaft | Flange |
